

SUSTAINABILITY: CONVERGING HUMAN, NATURAL, AND GLOBAL SYSTEMS

PROFESSORS

José Baltazar Salgueirinho Osório de Andrade Guerra

SYLLABUS

This course explores sustainability as an interdisciplinary field that connects human and natural systems within the context of global environmental and economic changes. Through in-depth study, students will understand the interactions between these systems and the emerging challenges in the effort to create a more sustainable world. Additionally, students will develop crucial skills such as scientific research, communication, and scenario modeling. The course also encourages the development of innovative and adaptive solutions that promote social and environmental justice. There is a strong emphasis on implications for Business Administration, focusing on the application of sustainability concepts to business strategies, providing tools for future business leaders to implement sustainable practices in organizations.

GENERAL OBJECTIVE: To equip students with an understanding and ability to apply the principles of sustainable development, with a special emphasis on the convergence of human, natural, and global systems.
